Fenet Gizaw

Software Engineer - AI/ML & Backend Systems

Addis Ababa, Ethiopia | simbani011@gmail.com | github.com/Fenet254

Education

BSc in Software Engineering
Jimma University
Expected July 2027

Skills

Languages
Python, TypeScript/JavaScript, SQL, C++, Java, Go

Web
React, Vue, Node.js, Express, FastAPI

AI/ML
PyTorch, TensorFlow, Keras, scikit-learn, OpenCV

Data
MongoDB, MySQL, NumPy, Pandas

Tools
Git, GitHub, Linux (WSL)

Certifications

Introduction to Deep Learning
Jimma University AI Center, 2025

Artificial Intelligence Fundamentals
Udacity

Data Analysis Fundamentals
Udacity

Android Developer Fundamentals
Udacity

Getting Started with Full Stack Java Development
SkillUp by Simplilearn

Summary

Fifth-year Software Engineering student at Jimma University with hands-on experience in AI research, computer vision, and full-stack development, currently interning at INSA on transformer-based code processing.

Experience

Research Intern

INSA - Current

- Working on a transformer-based code processing research project

Computer Vision Intern

Ethiopian Artificial Intelligence Institute - Previous

- Built a computer vision system for airplane weapon detection

Projects

Elara - AI Portfolio Assistant

- Hybrid RAG chatbot combining ChromaDB vector search, BM25, and a CrossEncoder reranker over a curated knowledge base
- FastAPI backend, React/Vite/TypeScript frontend, Gemini-powered answers, and on-demand role-tailored PDF CVs

Credit Card Anomaly Detection

- FastAPI backend and React/Vite frontend processing a ~24M-row scored parquet dataset
- Resolved memory crashes via chunked streaming and capped LRU caching; ROC-AUC ~0.876

DeepObfusCode

- Transformer-based sequence-to-sequence model for source code processing
- Work spans dataset preparation, tokenization, model training, and inference

Pneumonia Detection Web App

- Custom CNN that analyzes chest X-rays and generates patient reports with confidence scores
- Final project of the Jimma University AI Center Introduction to Deep Learning program

Spam Email/SMS Detector

- TF-IDF and Linear SVM classifier reaching ~98.5% accuracy
- Flask UI styled with a postal sorting-desk theme

Daily Budget Tracker

- MERN application for tracking daily income and expenses
- Imports transactions from SMS, Telebirr, and CBE Birr messages

Complaint Management System

- Complaint submission and tracking system built with TypeScript

Event Booking and Appointment System
- Event booking and appointment scheduling system built with TypeScript

Blog Platform
- Blogging platform with a Vue.js frontend

Home Furniture E-Commerce Website
- E-commerce website for home furniture built with JavaScript

Women Shop E-Commerce
- E-commerce storefront for women's products built with HTML

AI-Powered Weather App
- Weather application with AI-powered features, built with JavaScript

Portfolio Website
- Personal portfolio site deployed on Vercel

Chat Application
- Chat application built in Java

Seatbelt Detection
- Real-time seatbelt detection using computer vision

Hackathons and Activities

Software Programming and Engineering Club (SPEC)
- Member, Jimma Institute of Technology

Reboot the Earth 2025 Hackathon
- Team Green Guardians - one of 12 finalists out of 198 teams (Addis Ababa edition)

Fayda National ID Hackathon 2025
- Built a Fayda ID-based digital queue and token system; advanced to the virtual phase

Gebeta Voice Hackathon
- Team project: voice-command e-commerce access in local languages
